Our company:

E-b-trans is an expert of tank transport for sensitive and dangerous products since 1996. Serving customers of all sizes from a large range of industries such as Petroleum, Chemicals, Food and Environment, our Group ensures each year the safe delivery of more than 50 million cubic meters of goods across 14 European countries thanks to a fleet of 4,000+ trucks.

Context:

E-b-trans Informatique provides Information System services for all E-b-trans subsidiaries as well as E-b-trans customers. With the strong emergence of IoT and full deployment of connected devices in a truck, providing real time data to our operations and customers is a key competitive advantage for the Group. This is made possible within E-b-trans through our state-of-the-art application landscape, covering the end-to-end logistic business processes with a mix of built-in applications and on-the-shelf software.

In an effort to always propose cutting-edge functionalities to our customers and accompany our business growth, we need to strengthen our IS team in Luxembourg (Rodange) and are looking for:

IoT Engineer (m/f)

Mission:

OBC Engineer is mainly in charge of the on-board computing and other technical components for the Group, including management of evolutions in a project mode. EBTrans integrate his own tracking solutions for years. One of the main projects is the deployment, and the industrialization of the next generation of the computing units in more than 2500 trucks across Europe.
